ABSTRACT

During the 1960's financial problems began to infiltrate colleges and universities across the country. Demands began to pour in for higher student/faculty ratios in order to cut back the educational costs. Despite arguments that such action would decrease the quality of higher education, many colleges and universities increased their class size. The results, as found by a Carnegie Commission study group, indicate that the number of students sitting before a faculty member in a classroom has little to do directly with the quality of the educational results achieved. Educational quality depends upon the availability to topnotch students and teachers, and the use of excellent instructional methods; upon the efforts and interests of students; and upon the constant interaction of students and faculty members. ACADEMY FOR EDUCATIONAL DEVELOPMENT, INC.
OCTOBER 1972

The Academy for Educational Development, Inc., is a nonprofit tax-exempt planning organization which pioneered in the field of long-range planning for colleges, universities, and state systems of higher education. It has conducted over 100 major studies for institutions throughout the country, as well as for national agencies such as the U.S. Office of Education, the National Science Foundation, the Agency for International Development, and the National Institutes of Health. Additional information regarding the Academy's complete program of services to education may be obtained from its offices:

The Academy's Management Division was established in 1970, under grants primarily from the W.K. Kellogg Foundation, to help college and university presidents and other officials improve the administration of the nation's institutions of higher learning. To achieve this purpose, the Management Division conducts research, publishes the results, and organizes conferences and professional development programs.

HIGHER EDUCATION WITH FEWER TEACHERS

Some Examples of Current Practice

By
Anna Jo W. Behrens

Management Division
Academy for Educational Development, Inc.
October 1972

Numerous possibilities exist for providing higher quality education with fewer teachers in relation to the number of students. . . .

The issue is no longer one of class size. In fact, the concept of class size is archaic. The issue instead is one of how to use the whole range of possibilities to bring the best instruction to the student: independent study, individual instruction and counseling, laboratory work and practice, small class discussions, large class demonstrations and lectures, television with the ablest professors reaching thousands of students, and motion pictures which will bring the greatest teachers to successive generations of students.

All these possibilities along with the reorganization of the curriculum must be considered in relation to the objectives of the college. Clusters of people and clusters of jobs must be related to clusters of objectives. This would be a modern approach to college instruction.

Alvin C. Eurich, then Vice President,
Fund for the Advancement of Education,
at the Eleventh National
Conference on Higher Education,
Chicago, March 6, 1956.

III The Effect on the Budget of Different Student/Faculty Ratios	41

FOREWORD

Thirteen years ago Dr. Beardsley Ruml, then an educational planner and consultant, told colleges and universities that one road to financial stability and better salaries lay in higher student/faculty ratios.

But they didn't want to listen!

They wanted no part of the Ruml ideas and proposals!

They saw a higher education boom coming, and they wanted increased salaries and lower teaching loads!

For a number of years they achieved these objectives. How did it happen? The answer: greater income. Receipts in general and special accounts increased by 275 per cent between 1959 and 1969, at a time when student enrollments rose by only 125 per cent. Faculty salaries increased by 75 per cent on the average; fringe benefits were extended.

Starting in 1969 or thereabouts (depending upon the institution) the situation began to change. Money was harder to get and enrollments at many institutions leveled off. The problems became: how to cut expenses; how to reduce faculty and staff; how to work harder and longer. These problems were not limited to the average or to the impecunious institution. Prestige colleges and universities were feeling the financial pressure, too.

The question: What to do? A partial answer: increase student/faculty ratios, but do it unobtrusively. And this happened. The Carnegie Commission on Higher Education found recently that student/faculty ratios rose in most kinds of institutions during the 1960s. The Commission also found (in contrast to the conventional wisdom) that there had been "no apparent adverse effect on quality." An old concept had now become clearer; that is, within broad limits the number of students sitting before a faculty member in a classroom has little to do directly with the quality of the educational results achieved. Educational quality depends upon the availability of topnotch students and teachers, and the use of excellent instructional methods; upon the efforts and interests of students; and upon the constant interaction of students with faculty members.

It is against this background that the Academy has prepared this booklet on higher education institutions in which the student/faculty ratio is 20 to 1 or

above. The booklet doesn't urge or advocate a point of view. Its purpose is to provide examples of actual practice at the present time.

The funds for this project were supplied by the Esso Education Foundation. Some useful statistics, materials, and insights were provided by the United States Office of Education and the American Bar Association. Most of the data summarized in this booklet were obtained directly from the institutions involved. The Academy thanks all participants for their cooperation. The conclusions are, of course, those of the author alone.

Alvin C. Eurich, President
Academy for Educational Development, Inc.

FINDINGS

1. Today at least 80 four-year colleges and universities and 34 of the larger law schools have student/faculty ratios of 20 to 1 or above. The average student/faculty ratio for the country as a whole is about 13.5 to 1.
2. Administrators at the institutions involved believe that the quality of education has never been higher than it is today. They say that the increase in the ratios during the past five years or more has not impaired the effectiveness of the education provided.

Note: These were subjective views, obviously, but the study team observed that they were expressed frequently by the same type of academic executive who, a decade earlier, had seen the problem of maintaining quality of education as a serious deterrent to effectively increasing class size.

3. Administrators at the institutions involved also believe that the students in these colleges and universities are as well satisfied with faculty attention and performance with student/faculty ratios of 20 to 1 or above as are students in institutions where ratios are lower. Said one:

The real trick is to develop an exciting and stimulating class. The faculty member who can do this in introductory biology, for example, can do it as well for 100 students as for ten. There is no doubt that small classes have their place, particularly at the graduate level. But lectures to a small class are a waste of resources.

And to quote a long-time observer of the higher education scene:

All the small class lecture really does is enable the faculty member to deliver a mediocre talk in an intimate environment.

4. The main reason for higher student/faculty ratios today is the nationwide budget squeeze affecting nearly all institutions of higher learning. This was the report from colleges and universities of all kinds, public and private, large and small.
5. In a number of states, public pressures have encouraged state higher education boards and state legislatures to mandate the establishment of a higher student/faculty ratio. For example, in:

Arizona: The state Board of Regents established a ratio of one *new* faculty member for each 22 *new* students enrolled.

Kansas: The state Board of Regents established a 20 to 1 student/faculty position ratio.

Montana: The state Board of Education established a student/faculty position ratio ranging from 19 to 1 to 21 to 1 for the various state colleges and universities.

New Mexico: The state Board of Educational Finance established a 24 to 1 student/faculty position ratio.

6. In a number of other states, state financing patterns are based on student/faculty ratios which differ at the various levels of instruction. For example, in:

Missouri: The state Commission on Higher Education established student/faculty position ratios of 22 to 1 for the lower division, 18 to 1 for the upper division, and 12 to 1 for the graduate division.

Minnesota: Fall 1971 funds for state colleges were appropriated on the basis of a 19 to 1 student/faculty ratio at the undergraduate level and a 13 to 1 ratio at the graduate level (including service and support positions).

7. In New York and Ohio, the legislatures considered bills in recent sessions that would incorporate into law higher standards for faculty teaching loads at state-supported institutions. Although the bills were not finally enacted in these states, the legislatures left no doubt as to their intent to reconsider soon the need for clearly spelled out higher standards if the institutions did not set some themselves.

In California, the Governor's 1972-73 budget for higher education was based on student/faculty ratios which are considerably higher than those now existing. The average used for University of California campuses was a 17.4 to 1 ratio, and for the state college system an 18.25 to 1 ratio.

8. A wide variety of techniques are being used today to push student/faculty ratios upward. None of these seem to be particularly new or dramatic, but for the first time they are being used countrywide in a substantial way instead of just being discussed. Nineteen common techniques are listed in the box that follows:

Nineteen Ways Colleges and Universities are Increasing the Student/Faculty Ratio

Larger Classes

- Establishing large lecture classes with from 200 to over 1,000 students enrolled in such courses as:
 - Anthropology
 - Biology
 - Chemistry
 - Comparative Religion
 - English Literature
 - Fine Arts Appreciation
 - Fundamental Social Problems
 - General Education
 - Geography
 - Geology
 - Health Education
 - History
 - History of Civilization
 - Orientation to Special Education
 - Philosophy
 - Political Science
 - Psychology
 - Sociology
 - Speech
- Using closed-circuit educational television for courses enrolling as many as 2,000 to 3,000 students; tying together a number of classrooms.
- Increasing class size across the board, including upper-division classes.
- Increasing size of lower-division classes in order to have smaller upper-division and graduate courses.
- Keeping all classes filled, equalizing section enrollments, canceling classes with small enrollments.
- Having instructors balance small classes with large classes.
- Offering required courses with small enrollments only in alternate quarters, semesters, or years.
- Requiring students to take a certain percentage of introductory courses

(General Studies) in large lecture sessions.

Proliferation of Courses

- Restructuring curriculum to meet new student interests, eliminating small classes in areas in which student interest has declined.
- Reducing number of course offerings; avoiding course proliferation.
- Consolidating basic courses duplicated in several departments.
- Phasing out disciplines with small classes, particularly languages.

Other Measures

- Using educational radio again (one institution reported 1,000 students had passed radio courses in the last three years).
- Using extensively other types of audio-visual materials such as slides, filmstrips, tapes, films, etc; also computer programming.
- Establishing and using intensively learning centers and laboratories.
- Using programmed instruction (one institution enrolled 600 students in an introductory biology course. Three faculty members assisted students, who worked at their own pace. Course could be completed in less than a semester; pretesting permitted them to begin above the lowest competency level).
- Granting credit for course work taken over commercial television and tested on campus.
- Granting credit by examination for subject material learned outside of college (for example, languages and some parts of business administration).
- Reducing number of credit hours required for graduation.

9. Administrators contacted in this study noted frequently that high student/faculty ratios and the size of classes were related to a large extent to the level of course offerings. Lower-division classes, for example, are larger on the average than upper-division classes, which in turn tend to be larger than graduate classes. For example, at the University of Florida:

The ratio for the University as a whole was	19:1
For lower-division undergraduate programs	28:1
For upper-division undergraduate programs	18:1
For beginning graduate programs	18:1
For advanced graduate programs	7:1

10. Many administrators also emphasized that an important factor in making possible higher student/faculty ratios has been the concentration of today's students in nontechnical subject areas, notably social sciences and business, in which large classes are generally more feasible than, for example, in physical sciences and math. In some cases large lecture classes are most suitable; in others TV and other audio-visual aids can be used most effectively.

11. Many of the institutions in the study emphasized that leveling with faculty about budget problems was the most important step that administrators had taken to persuade faculty of the need to achieve higher student/faculty ratios. Included in these efforts were such direct measures as:

- Involving faculty closely in budget planning, so they will be apprised early of budget problems.
- Increasing salaries only when faculty agree to larger classes.
- Hiring only faculty willing to teach relatively large classes.
- Determining with each department head the maximum feasible size of classes.
- Measuring faculty workloads and telling department chairmen how many students are needed per class in order to balance the budget.
- Enforcing full-time teaching load requirements.
- Increasing faculty teaching loads and contact hours especially when faculty are not expected to conduct research.

- Requiring administrators to teach full time or nearly full time.
 - Not filling vacant faculty positions.
 - Using more graduate and undergraduate assistants to lead small discussion groups and to take care of paper work; in some cases granting them course credit instead of paying them.
 - Hiring part-time faculty when qualified people are available.
12. The study concentrated on institutions with student/faculty ratios of 20 to 1 or better. Included were the liberal arts colleges of the University of Minnesota and the University of Pittsburgh, the three Arizona state universities and Oklahoma State University, and the law schools at such universities as Harvard, Minnesota, Michigan, Texas, and California (Hastings College of Law). In addition, the study found that a number of institutions with low student/faculty ratios have been pushing recently toward higher ratios. For example, in one year Yale College increased its student/faculty ratio from 5 to 1 to 7 to 1; the College has had a serious budget squeeze for several years.

CONCLUDING NOTE TO THE FINDINGS

This study was conducted in the Spring of 1972 to verify the belief that:

- Many examples of student/faculty ratios of 20 to 1 or above could be assembled within a relatively short period of time.
- Faculty, students, and administrators at the institutions involved would agree that the higher ratios, over those existing, say, a decade ago, had not deteriorated the quality of education provided.

The study team assembled information on 125 educational units — 80 separate college and university campuses, an additional 11 colleges or schools within these institutions, and 34 law schools which were portions of large university systems. The team believed that further tabulations would not contribute substantially to the findings of the study.

MODELS OF THE POSSIBLE

In his book *Memo to a College Trustee** Beardsley Ruml argued that his goal of a 20 to 1 student/faculty ratio could provide quality education and better salaries than were then being paid. He proposed that the college curriculum combine large lecture courses averaging 90 - 300 students, small lecture-discussion courses averaging 45 - 90 students, and seminar-tutorials averaging 10 - 16 students. He drew up a number of alternative models of various class size combinations.

More recently, Howard R. Bowen and Gordon K. Douglass, in a book** for the Carnegie Commission on Higher Education, suggested an eclectic plan calling for a mixture of various methods of instruction "so that students can have varied experiences as they pursue their college careers and so that professors can teach in the manner that suits their talents and tastes." Three models are presented by these authors to indicate the savings in instructional budgets which might result from reducing proliferation of courses and increasing student/faculty ratios.

A model is of course only an abstraction. It is useful for exciting the imagination and for looking beyond the complexities, hurdles, constraints, and limitations of the present situation. But it is still a calculation that exists on paper and is submitted with the observation that it *ought* to work.

In the past only abstractions were available. Examples could not be assembled to show how any college or university or a portion of such an institution had actually achieved a 20 to 1 or similar student/faculty ratio.

Today some examples have worked out in practice. Ten are included here to show the range of possibilities. Included are institutions with enrollments between 1,100 and 24,000 students, and with student/faculty ratios between 20.7 to 1 and 32.3 to 1; with undergraduate and graduate students; and with lecture, discussion, laboratory, and seminar classes.

Total	180 classes

GUIDES TO ACTION

The proposal in this report is that colleges and universities everywhere examine the possible models, and then consider their applicability to their own institutions.

The Academy holds no brief for the particular models or examples in this report. They show only what has been possible at the particular institutions involved. For every other institution the achievement of the possible is a management problem which has to be tailored to local requirements and needs. Planning is required at the very heart of the academic enterprise; also required is cooperative effort to an extent not previously achieved by faculty, administrators, students, trustees, and the general public.

During the past several years a number of studies have dealt with the arrangement of curricula and the possibilities of higher student/faculty ratios, a smaller number of course offerings, etc. For administrators and faculty wishing to pursue the matter further the following references might be helpful:

Bowen, Howard R. and Gordon K. Douglass, *Efficiency in Liberal Education*: Carnegie Commission on Higher Education, McGraw-Hill Book Company, New York, 1971.

Carnegie Commission on Higher Education, *The More Effective Use of Resources, An Imperative for Higher Education*: McGraw-Hill Book Company, New York, June 1972.

Ruml, Beardsley with Donald H. Morrison, *Memo to a College Trustee*: Fund for the Advancement of Education, McGraw-Hill Book Company, New York, 1959.

The Study Group on Yale College, *Report of the Study Group on Yale College*: New Haven, Connecticut, April 1972.

STATISTICAL NOTES

1. This study was limited to four-year colleges and universities and to law schools. Two-year community and junior colleges were excluded. They have relatively high student/faculty ratios, but their goals differ from those of four-year colleges and universities and their inclusion in the study would have distorted the analysis. (The Carnegie Commission on Higher Education report cited earlier said that student/faculty ratios at public two-year colleges have changed little in recent years and ratios at private two-year colleges have actually declined.)
2. Generally the data are for the Fall of 1971. In a few cases, 1970 data were the latest available and they were used.
3. The terms "students" and "faculty" mean full-time equivalent. However, the study staff noted some differences in the definition as used by the various colleges and universities contacted. These are not believed to be great enough to affect the validity or compatibility of the data in this report.
4. Teaching assistants are included under the formulae used at the various institutions. Some major universities, for example, count four half-time graduate-student assistants as equivalent to one full-time faculty member.
5. The 80 four-year colleges and universities for which data have been assembled consist of 13 state and state-related universities, 45 state colleges, one municipal university, and 21 private colleges. In the aggregate these institutions enrolled 477,555 full-time equivalent resident degree-credit students, or nearly 10 per cent of the total enrolled in all of the four-year colleges and universities in the country.
6. The 34 law schools for which data have been assembled comprise more than 35 per cent of the law schools offering day sessions only and include more than 50 per cent of the enrollments in such law schools.

APPENDIX TABLES

Appendix I summarizes the data assembled for the 80 colleges and universities and the 34 law schools. Appendix II provides further information on student/faculty ratios at the 80 colleges and universities. Appendix III presents data on how budget savings might be achieved by increasing student/faculty ratios.

APPENDIX II — DETAILED INFORMATION FOR 80 COLLEGES AND UNIVERSITIES

ALABAMA STATE UNIVERSITY

Montgomery, Alabama 36104

Students	Faculty	Ratio	Fall 1971 Faculty Load
2,644	116	22.8:1	Undergraduate: 12-15 hours
Type of Institution	Highest Offering		Graduate Enrollment
State	Master's Degree		12%

Remarks

Largest lecture classes in history and biology, about 75 students.

Use audio-visual aids as teaching supplement; no TV.

For Additional Information

Dr. Robert D. Reid, Vice President for Academic Affairs

ALCORN AGRICULTURAL AND MECHANICAL COLLEGE

Lorman, Mississippi 39096

Students	Faculty	Ratio	Fall 1971 Faculty Load
2,777	120	23.1:1	15 hours
Type of Institution	Highest Offering		Graduate Enrollment
State	Bachelor's Degree		None

Remarks

Trend toward nontechnical areas (such as business and social sciences) as opposed to such areas as mathematics and chemistry permits use of large classes.

For Additional Information

Mr. David W. Wilburn, Registrar

ARIZONA STATE UNIVERSITY

Tempe, Arizona 85281

	Students	Faculty	Ratio	Fall 1971 Faculty Load
University	23,277	862	27.1:1	12 hours
College of Business Administration	3,267	88	37.1:1	12 hours
Graduate School of Social Service Administration	215	6	35.8:1	12 hours
College of Liberal Arts	11,275	360	31.3:1	12 hours
College of Education	3,345	113	29.6:1	12 hours

Type of Institution	Highest Offering	Graduate Enrollment
State	Doctoral Degree*	21% (University)

Remarks

Board of Regents allots new faculty positions on basis of 22:1 ratio.

Unable to hire new faculty because of budget restrictions; enrollments growing rapidly.

Large class sections in lower and upper divisions; some upper-division classes have 65-75 students.

Quality of learning not impaired but poor students may not be getting as much as they should. Good students appear to do as well as similar students at universities with lower ratios.

*University. Not all Colleges offer doctoral degree.

For Additional Information

Mr. T. Tilman Crance, Director of Budgets and Institutional Studies

Dr. William R. Gable, Executive Coordinator, Arizona Board of Regents, Phoenix

ATLANTIC CHRISTIAN COLLEGE

Wilson, North Carolina 27893

Fall 1971

Students
1,685Faculty
82Ratio
20.5:1Faculty Load
15 hoursType of Institution
Private, church relatedHighest Offering
Bachelor's DegreeGraduate Enrollment
None**Remarks**

Faculty accepted larger classes in order to get salary increases.

Class sizes: business classes, up to 45 students; religion classes, up to 85 students.

Ratio up slightly from Fall 1970.

For Additional Information

Dr. Arthur D. Wenger, President

BENTLEY COLLEGE

Waltham, Massachusetts 02154

Fall 1971

Students
1,912Faculty
68Ratio
28.1:1Faculty Load
12 hoursType of Institution
PrivateHighest Offering
Bachelor's DegreeGraduate Enrollment
None**Remarks**

95% of enrollments in business and accounting.

Largest classes in accounting, 60 students.

Arts and sciences courses are principally survey courses, maximum size, 40 students.

Ratio increased from 22:1 in Fall 1970.

For Additional Information

Dean John T. Nichol, Dean of College

BOISE STATE COLLEGE

Boise, Idaho 83707

Fall 1971

Students
5,992Faculty
290Ratio
20.7:1Faculty Load
12 hoursType of Institution
StateHighest Offering
Master's DegreeGraduate Enrollment
5%**Remarks**

Both financial squeeze and rapid increase in enrollments have occurred in recent years.

Enthusiastic faculty has been major factor in handling problem.

Little emphasis on research and graduate programs allows faculty more time for large classes.

Lack of money prohibits development of audio-visual techniques to reduce faculty load.

Ratio has remained nearly constant for 3-4 years.

For Additional Information

Mr. Herbert W. Runner, Administrative Assistant to the Executive Vice President

Students 9,401*	Faculty 354*	Ratio 26.6:1	Faculty Load 12 hours
Type of Institution State	Highest Offering Doctoral Degree	Graduate Enrollment 16%	
Remarks			
Indianapolis campuses of Indiana and Purdue consolidated in 1970, with Indiana having control over Liberal Arts and Humanities, Purdue having control over more technical areas, such as Natural Sciences and Engineering; physical management and budgetary control in hands of Indiana. Severely hit this biennium by inadequate budget in face of increasing enrollments and costs. Average class size has increased to 26 students. Have had radio for 40 years; used extensively only in past 3 years when 1,000 students have taken and passed courses. Closed-circuit TV network links Lafayette (Purdue main campus) and regional campuses. Technical laboratories for freshmen and sophomores cut. Engineering School reduced required credit hours for graduation from 150 to 130 hours. Credit given by examination in some courses.			
*Excludes Schools of Dentistry, Law, and Medicine.			
For Additional Information

Ratio
22.4:1

Faculty Load
Undergraduate: 12 hours

Type of Institution
State

Highest Offering
Master's and Education
Specialist Degrees

Graduate Enrollment
15%

Remarks

Kansas Board of Regents has established a faculty-position ratio of 20:1.

Largest class is an introductory biology course which enrolls 600 students. Programmed text is used; students are pretested to determine their competency level and work at their own pace, so they may complete the course in less than a semester; three faculty members are available to assist students.

A course in General Education has up to 400 students; other relatively large classes are in Art and Music Exploration, Fundamentals of Mathematics, Introduction to Psychology, pre-preparatory courses in teacher education.

Largest enrollments are in business and psychology which generally are suitable for large classes. Cancel very small classes.

Mr. Thomas Fischer, Assistant Comptroller

APPENDIX III — THE EFFECT ON THE BUDGET OF DIFFERENT STUDENT/FACULTY RATIOS

In their report for the Carnegie Commission on Higher Education, Howard R. Bowen and Gordon K. Douglass examined the question of how an independent liberal arts college might provide education of high quality with the least average expenditure per student enrolled. They prepared models which assumed a number of combinations of curricula, teaching loads, and student/faculty ratios. The models include possibilities ranging from "high proliferation of courses with low teaching loads" to "low proliferation of courses with high teaching loads."

One conclusion from the models relevant to the Academy's study is that the instructional budget might be reduced by as much as 55 percent by changing the combination of courses and teaching loads, and a high quality program could still be maintained. A comparison of a number of possibilities is in the table that follows:

TABLE E
Changes in the Budget for Instruction that Might Be Achieved by
Varying the Curriculum and the Student/Faculty Ratio
in a Liberal Arts College with 1,200 Students

Curriculum Load Assumed	Number of Faculty Required	Student/Faculty Ratio	Estimated Budget for Instruction Required	Reduction from the Budget Cost of \$3,206,000 that Might be Achieved by Reducing Proliferation and Increasing the Student/Faculty Ratio	
				Amount	Per cent
High proliferation*					
Light teaching load ^a	150	8:1	\$3,206,000	-	-
Moderate teaching load ^b	120	10:1	2,683,000	\$ 523,000	16%
Heavy teaching load ^c	100	12:1	2,332,000	874,000	27%
Moderate proliferation**					
Light teaching load ^a	129	9:1	\$2,714,000	\$ 492,000	15%
Moderate teaching load ^b	100	12:1	2,280,000	926,000	29%
Heavy teaching load ^c	83	14:1	1,985,000	1,221,000	38%
Low proliferation***					
Light teaching load ^a	86	14:1	\$1,923,000	\$1,283,000	40%
Moderate teaching load ^b	68	18:1	1,628,000	1,578,000	49%
Heavy teaching load ^c	56	21:1	1,430,000	1,776,000	55%

Source: Bowen, Howard R. and Gordon K. Douglass, *Efficiency in Liberal Education*: McGraw-Hill Book Company, New York, 1971, pp. 96-7; also Bowen, Howard R., "Can Higher Education Become More Efficient?" *Educational Record*, Summer 1972, p. 196.

General Note: All figures have been rounded for convenience in presentation.
Other Notes:

- * Average class size 17 students; program of 450 courses and 570 classes.
- ** Average class size 20 students; program of 335 courses and 476 classes.
- *** Average class size 30 students; program of 225 courses and 320 classes.
- ^a Four lecture-discussion classes or three laboratory or studio classes per year.
- ^b Five lecture-discussion classes or four laboratory or studio classes per year.
- ^c Six lecture-discussion classes or five laboratory or studio classes per year.

As elsewhere in this study the Academy moved from models calculated by scholars to actual situations. Projection data examined from 40 private liberal arts colleges and universities in Ohio, for example, showed that by 1974-75 these colleges expect that their:

Full-time equivalent enrollment will be	80,000
Full-time equivalent teaching faculty will be	5,100
Composite student/faculty ratio will be	15.7 to 1
Aggregate budget for instruction and departmental research will be	\$113,557,000
Overall deficit will be	\$ 2,535,000
Deficit as a percentage of aggregate instructional budget will be	2.2%

If other factors at the colleges did not vary from the projections already made, changes in the student-faculty ratio alone would provide the following composite projections for 1974-75 for instruction:

TABLE F
Changes in 1974-75 Budget Projections
for 40 Ohio Colleges that Might Be
Achieved by Increasing the Student/Faculty Ratio

Ratios	Budget for Instruction	Reductions from Budget Projections of \$113,557,000 that Might Be Achieved by Increasing Student-Faculty Ratio	
		Amount	Per cent
Actual projection 15.7 to 1	\$113,557,000		
Alternative possibilities			
16 to 1	\$111,330,000	\$ 2,227,000	2%
17 to 1	104,784,000	8,773,000	8%
18 to 1	98,950,000	14,607,000	13%
20 to 1	89,064,000	24,493,000	22%
22 to 1	80,959,000	32,598,000	29%
25 to 1	71,251,000	42,306,000	37%

The calculations on possible reductions in institutional budgets are obviously theoretical, inasmuch as a substantial change in student/faculty ratios is likely to involve other changes on campus. The figures are illustrative, however, of the high leverage that changes in student/faculty ratios would have on the instructional budgets of colleges and universities and on their deficits.
